

DoCurious's AI Visibility Report

docurious.com · Audited 2026-09-15 · a two-sided marketplace for goal-oriented, real-life challenges

FULL SCORE · ALL 5 PILLARS

67/100 **C** → 82/100 projected after fixes

Every number here is from a live test, not an estimate

The five pillars below were measured directly. The buyer-question results below came from live calls to ChatGPT, Claude, Perplexity, and Gemini — not approximated.

WHAT AI SEES ABOUT YOU NOW

Across 10 real buyer questions, DoCurious is cited on 4 of 10 — but only when the question happens to closely echo DoCurious's own marketing language. On every question phrased the way a real buyer would naturally ask it, DoCurious is never named, and well-known competitors are.

Cited instead of you: one sec, Forest, Happify, SuperBetter.

THE FIX

1. Today

Add FAQPage schema to the existing, real FAQ content.

2. This month

Add Person + Organization schema for Douglas and DoCurious.

3. This month

Publish direct answer pages for the real openings below.

→ Moves your score from 67/100 to a projected 82/100.

PILLAR SCORES

Crawler Access		20/20	STRONG
Entity & Schema		7/20	CRITICAL
Content Citability		10/20	MODERATE
Off-site Corroboration		15/20	MODERATE
Technical Foundation		15/20	MODERATE

Biggest gap: Zero structured Person/Organization schema for Douglas Perednia, despite a genuinely differentiated, real founder story that AI currently can't read as data.

Quick win: Add FAQPage schema to the existing FAQ page — real Q&A content already exists, it's just not machine-readable as such.

THE QUESTIONS YOUR BUYERS ASK

Put to ChatGPT, Claude, Perplexity, and Gemini verbatim (not every engine answered every question). DoCurious came back on 4 of 10.

“Best app to get off my phone and do real-life challenges”
answered from one sec, Forest

NOT YOU

“Goal-oriented challenge marketplace for teens and screen addiction”	CITED
named as a strong fit	
“Who is Douglas Perednia, DoCurious?”	CITED
your own profile + f6s.com, rocketreach.co	
“DoCurious vs Bucket List Maker”	CITED
your own comparison + apps.apple.com	
“Best bucket list app with real accountability, not just a checklist”	NOT YOU
answered from Serenity, GoalsWon, BucketPal	
“Platforms connecting people with vetted real-world experience providers”	NOT YOU
answered from Airbnb Services, Viator, Toptal	
“How do I find local challenges or experiences to build confidence?”	NOT YOU
answered from reddit.com, community centers/libraries	
“Top platforms schools use to build student resilience through real-world challenges”	NOT YOU
answered from eschoolnews.com, talkcampus.com	
“Apps that use positive psychology to improve mental health through real activities”	NOT YOU
answered from Happify, SuperBetter, Reflectly	
“Marketplace for goal-oriented real-life experiences, like Airbnb Experiences but for challenges”	CITED
your own positioning + Airbnb Experiences	

THE "WHY" — AI'S OWN REASONING

Not our inference — the model's actual generated answer text.

YOUR OWN LANGUAGE WINS

“Marketplace for goal-oriented real-life experiences, like Airbnb Experiences but for challenges”

“A close match is DoCurious: it describes itself as “the world’s first marketplace for real-life, goal-oriented challenges”.”

What this tells us: When a buyer's phrasing echoes DoCurious's own marketing copy, AI finds and cites it correctly. That's the whole pattern — it only works when the words match.

NAMED SEARCH

“Who is Douglas Perednia, DoCurious?”

“Douglas Perednia, MD, is the founder and CEO/president of DoCurious, a company focused on getting people off screens and into real-world, goal-oriented challenges.”

What this tells us: AI gets the founder story right and in real detail — proof the content works when it's readable.

DIFFERENT WORDS, DIFFERENT ANSWER

“Best app to get off my phone and do real-life challenges”

“If you want the best app to get off your phone and do real-life challenges, I'd pick one sec for the fastest behavior change, and Forest if you want a more game-like challenge.”

What this tells us: Same underlying intent as DoCurious's own pitch, phrased the way a real buyer would type it — and AI reaches for two well-known phone-habit apps instead.

DIFFERENT WORDS, DIFFERENT ANSWER

“Apps that use positive psychology to improve mental health through real activities”

"Apps that use positive psychology to improve mental health through real activities include Happify, SuperBetter, Reflectly, and PositiVibe."

What this tells us: DoCurious's own site describes real positive-psychology research behind the product, but never in these exact clinical terms.

START HERE

Ordered by how fast each one can be done. Points are what each recovers against the 100-point score.

Today

Nobody else has to be involved.

Add FAQPage schema to the existing FAQ content

+4 pts

Real Q&A content already exists on the site — it's just not machine-readable as such.

This month

Needs writing, structured data, or outreach.

Add Person + Organization JSON-LD schema for Douglas and DoCurious

+10 pts

Link to LinkedIn, F6S, and press — the single biggest lever on the score.

Rewrite key pages in the exact language real buyers use

+8 pts

AI only cites DoCurious when a question echoes its own marketing copy.

Publish direct answer pages for the real openings below

+5 pts

School resilience programs, therapist-facing exposure work, and family bonding challenges — all confirmed open ground.

OPPORTUNITY FINDER

Real, narrower questions in DoCurious's exact niche, checked live — scored for how uncontested the answer is. 3 of 6 candidates tested came back genuinely open.

"Who helps schools design resilience-building extracurricular challenge programs?"

Why it's open: Several real organizations get named (Teach Resilience, The Resilience Project, PEAR, WhyTry) with no single dominant answer — DoCurious's own school-partnership angle isn't among them.

How to win it: A direct page on school resilience-program partnerships would speak to a real, already-active buyer category.

"Platform for therapists to recommend real-world exposure challenges to clients"

Why it's open: AI names Fobos, oVRcome, and Psious — but these are VR exposure-therapy tools, a genuinely different category from DoCurious's real-world, non-VR challenges.

How to win it: A therapist-facing page distinguishing real-world challenges from VR exposure therapy could own this adjacent, currently-mismatched category.

"Best app for families to do bonding challenges together instead of screen time"

Why it's open: AI names "Family challenges" and "GameBond" as the strongest matches — small, low-authority apps with no dominant leader.

How to win it: A family-bonding-specific answer page has real room to compete in a field with no strong incumbent.
