FxMEDUS's AI Visibility Report

Prepared for Julian Borges, MD, Founder, CEO & Chief Scientist · fxmedus.com (scored) · drugsynth.ai · medboard.pro · fxmed.com.br · Audited 2026-10-20 · governed AI for medicine — drug discovery, clinical operations, licensure prep

FULL SCORE · ALL 5 PILLARS · FXMEDUS.COM

71/100 **B** → 85/100 projected after fixes

Every number here is from a live test, not an estimate
10 real questions — from the people who need to find FxMEDUS: pharma and biotech teams, investors, academic collaborators, physicians in Brazil, and medical trainees — were put to **Claude and Perplexity** twice on 2026-10-20 and the answers read in full. **ChatGPT and Gemini were unavailable in this run** (API access), so they are not counted — not tested is not the same as not cited. An engine counts as citing you if it used one of your own pages (website, GitHub, profiles) as a source in either run. Where our automated classifier and the answer text disagreed, we went with the text.

WHAT AI SEES ABOUT YOU NOW

Ask AI about Julian Borges, FxMEDUS, EGLS, or governed multi-agent drug discovery, and **it cites your own pages — 9 times across 18 engine checks, on 7 of 10 questions.** DrugSynthAI is called “the clearest publicly documented match” for governed drug discovery with kill switches. It goes quiet exactly where someone is **choosing**: the investor question, the Portuguese-language EHR question and the USMLE question (0 of 6 checks). And the answer to “is there an open standard for governing AI drug discovery?” is **“No”** — even though you published one (AIDD-GOV), and Claude lists your repo as a source.

Cited instead of you: Insilico Medicine, Formation Bio, Genesis Therapeutics, AMBOSS, UWorld, DrinCloud, Afya iClinic, GestãoDS.

THE FIX

1. Today
Pick one wording for product status, agent counts, location and patents, and apply it everywhere. Add canonical tags.

2. This month
Connect fxmed.com.br, YouTube and GitHub into one entity graph. Pre-render medboard.pro.

3. This month
Earn independent mentions, and publish pages for the real openings below.

→ Moves your score from 71/100 to a projected 85/100.

PILLAR SCORES

Crawler Access	19/20	STRONG
Entity & Schema	15/20	MODERATE
Content Citability	15/20	MODERATE
Off-site Corroboration	9/20	MODERATE
Technical Foundation	13/20	MODERATE

Biggest gap: AI can find **four facts that disagree**, and repeats whichever it reads. (1) The home page tags DrugSynthAI and FxMED OS “Live · Phase 3,” the FXMed OS page says “Pre-seed R&D · not commercially available,” and llms.txt says “No commercial product launch to date.” (2) drugsynth.ai says “46 autonomous agents”; fxmedus.com/capabilities and the AIDD-GOV README say 67 agents and 536 tests. (3) The site's title, schema and llms.txt say Boston; its footer says Aventura, Florida — and AI answers repeat both. (4) The home page meta description says “Three US patents” while the body, schema and llms.txt say three US *provisional* patents. Investors and pharma teams diligence quickly, and the difference matters.
Quick win: one fact sheet, applied everywhere. A few days of work.

Your other properties

drugsynth.ai: 1,064 words, no structured data, says 46 agents. **medboard.pro**: a JavaScript app — a crawler that doesn't run JavaScript reads 11 words (two schema blocks are present). **fxmed.com.br** (Julian's Brazilian site): 5 schema blocks and a sitemap, but it never mentions FxMEDUS and fxmedus.com doesn't link to it — yet AI uses it to describe Julian ("medical director at FxMED in Brazil") and to source DrugSynthAI. **fxmedus.com** itself: all major AI crawlers allowed, sitemap and llms.txt present, no canonical tag on the home page and five others, and /fxmed-os missing from the sitemap.

THE QUESTIONS YOUR BUYERS ASK

Put verbatim to Claude and Perplexity, twice. Your own pages were cited on 7 of 10 (4 named, 3 source-only); 9 of 18 engine checks.

COMPANY & FOUNDER (FXMEDUS.COM)

"Who is Julian Borges, MD, founder of FxMEDUS?" — NAMED

both engines name him and FxMEDUS, citing fxmedus.com and GitHub; Perplexity also uses fxmed.com.br and a Gravatar profile

"What is FxMEDUS and is it a legitimate AI company?" — NAMED

named, with a caveat: "much of the evidence comes from FxMEDUS itself or business-directory profiles"

"What is Externally Governed Learning Systems (EGLS) in clinical AI?" — SOURCE ONLY

Perplexity explains your framework from fxmedus.com and ResearchID without naming you; Claude did not cite you

"Is there an open standard for governing AI drug discovery pipelines?" — SOURCE ONLY

the answer is "No" (FDA–EMA, EMA, ICH); Claude lists github.com/fxmedus/aidd-gov as a source anyway

"I'm a biotech investor evaluating AI drug discovery startups with built-in governance and audit trails. Which physician-led companies should I look at?" — NOT YOU

referrer question: Insilico Medicine, Formation Bio, Genesis Therapeutics, Perceptic

"Which physician-founded companies are building governed clinical AI in South Florida?" — NAMED

named first (Perplexity), ahead of Aurevia MD, OpenEvidence, Aquoris; Claude returned no answer

"Qual o melhor prontuário eletrônico para medicina funcional no Brasil com scribe de IA em português?" — NOT YOU

answered from DrinCloud, Afya iClinic, GestãoDS, Dr. Assistente, RMed

DRUGSYNTHAI (DRUGSYNTH.AI)

"Best AI platforms for de novo drug design targeting mitochondrial diseases" — SOURCE ONLY

drugsynth.ai used as a source (Perplexity); the answer recommends Insilico Chemistry42, REINVENT4, Relay Dynamo

"Which drug discovery platforms use multi-agent AI with an auditable governance layer and kill switches?" — NAMED

"The clearest publicly documented match is DrugSynthAI" (Perplexity); Claude returned no answer

MEDBOARDPRO (MEDBOARD.PRO)

"Best adaptive AI question bank and tutor for USMLE Step 1 and Step 2" — NOT YOU

answered from AMBOSS, UWorld + UAsk, StudyBank

THE "WHY" — AI'S OWN REASONING

Not our inference — the models' actual generated answer text.

CITED, WITH A CAVEAT

"What is FxMEDUS and is it a legitimate AI company?"

"The public footprint appears small, and much of the evidence comes from FxMEDUS itself or business-directory profiles. … 'legitimate company' does not necessarily mean its technology or commercial claims have been independently validated."

What this tells us: AI is fair to you and honest about what it can't verify. Everything it found is self-published or an aggregator listing. Independent mentions — conference pages, journal pages, collaborations — are what move this answer.

THE OPEN-STANDARD QUESTION, MISSED

“Is there an open standard for governing AI drug discovery pipelines?”

“No. There is not yet a single, globally accepted open standard specifically governing end-to-end AI drug-discovery pipelines.”

What this tells us: You published exactly this — AIDD-GOV, Apache 2.0, on GitHub. Claude even lists the repo as a source, but the answer is built from FDA, EMA and ICH pages. A page that answers this question in its first sentence, with a crosswalk to those bodies' principles, is the fix.

THE INVESTOR QUESTION, MISSED

“I'm a biotech investor evaluating AI drug discovery startups with built-in governance and audit trails. Which physician-led companies should I look at?”

“Start with Insilico Medicine, Formation Bio, Genesis Therapeutics, and Perceptic — but distinguish companies with publicly evidenced physician leadership from those that merely have strong scientific or platform leadership.”

What this tells us: That last clause is your edge — a board-certified endocrinologist leading governed AI is the differentiator AI is explicitly asking for. It just can't find public evidence of it beyond your own pages.

START HERE

Ordered by how fast each can be done. Points are what each recovers against the 100-point score.

Today

Nobody else has to be involved.

Write one fact sheet and apply it everywhere — **+3 pts**

Product status (live / beta / research), agent and test counts, location, and “provisional” patents — across fxmedus.com, drugsynth.ai, medboard.pro, GitHub and llms.txt.

Add canonical tags and fix the sitemap — **+1 pts**

Canonical on the home, about, publications, contributions, editorial and contact pages; add /fxmed-os to the sitemap.

This month

Needs development, outreach, or writing.

Connect the entity graph — **+2 pts**

Add fxmed.com.br, the YouTube channel and GitHub to the Organization and Person sameAs, and link the sites to each other.

Pre-render medboard.pro — **+2 pts**

Serve the content in the raw HTML so crawlers that don't run JavaScript can read it.

Earn independent mentions — **+4 pts**

Conference and journal pages that name FxMEDUS (AIMed, ACMG, SET III, MEDevice Boston), collaboration announcements, guest pieces on governed AI.

Publish pages for the openings — **+2 pts**

AIDD-GOV explainer with an FDA–EMA / NIST crosswalk, a MedClaw page, an academic-partnership page, each opening with the answer.

OPPORTUNITY FINDER

Real, narrower questions in your exact niche, checked live and scored for how uncontested the answer is. 4 of 8 candidates came back genuinely open, 1 is already yours, 2 are owned by regulators and journals, and 1 (Portuguese-language scribe) is open but waits on FXMed OS becoming commercially available.

“Best open standards for governing AI in drug discovery pipelines”

Why it's open: AI recommends a stack of FDA–EMA principles, ISO/IEC 23894 and NIST, and never mentions AIDD-GOV.
How to win it: An explainer page that answers the question in its first sentence and maps AIDD-GOV to those frameworks; get one third party to cite it.

“Open source local-first multi-agent frameworks for healthcare AI”

Why it's open: AI lists MARC, MedAgents, MAM and MedGraph-AI. MedClaw isn't in the answer.
How to win it: A MedClaw page that states what it is, how it runs locally (Ollama), and how it compares to the named frameworks.

“Which physician-led AI startups can academic researchers partner with for clinical validation studies?”

Why it's open: AI names Almanac Health, Powerful Medical, UpDoc and AI-HEART. Your site says collaboration is arranged case by case, but not on a page AI finds for this question.
How to win it: A research-collaboration page: what you offer, what data and platforms are available, how to start.

“Best adaptive USMLE preparation for international medical graduates”

Why it's open: AI answers UWorld plus AMBOSS or USMLE Easy. MedBoardPRO isn't mentioned.
How to win it: An IMG-specific MedBoardPRO page (and a pre-rendered homepage), once the beta is ready to be recommended.

“AI drug discovery platforms for rare genetic mitochondrial disease”

Why it's open: Already yours: DrugSynthAI / MitoCoreX is named first, ahead of Unravel Biosciences.
How to win it: Keep the claims consistent (agent counts, status) so this answer stays strong under diligence.
